

FITTING INSTRUCTIONS FOR JENKS' BOLTS SEAT "THUMB BOLTS"

Above: Three sizes of Black Jenks' Bolts
Right: Standard Jenks Seat Thumb Bolts on a T100
Middle: Hidden Seat Bolts on a Thruxton
Lower: Short Seat Bolts on a T100 Bonneville with Corbin "Smuggler" Seat

About Jenks Seat Bolts

The original Jenks "Seat Thumb Bolts" were developed to provide a quicker and simpler alternative to the stock Allen Bolts used by Triumph to fix the seat.

The Seat bolts are available in 3 lengths, 110mm, 85mm & 55mm and in 2 finishes, Black and Nickel. All bolts are CNC machined from HT30F aluminum stock and finished with either hard black anodizing or bright nickel plate, to protect the aluminum and give years of trouble free use. The bolts are compatible with the Triumph pannier, grab rail and sissy bar fittings, also the Renntec™ rack and most after market seats, seat fittings and racks.

Installation

Remove the standard seat bolts using a long reach 6mm hex/Allen wrench. Take care not to scratch the rear fender/mudguard. Check that the front end of the seat is still securely in place on the bike. Fit the thumb bolts into the holes from which you removed the original bolts. Screw down, but do not tighten. Push the seat firmly towards the tank, check the seat is square and then tighten.

IMPORTANT: Regularly check the Bolts are tight.

The bolts should be 20Nm, which is about as tight as can be made using fingers on the knurled grip.

Do **not** tighten with pliers. For added security, lock washers may be used if desired.

Do **not** attach bungee cords to the Seat Thumb Bolts.

Contents & Application

The table below lists the applications for which the bolts in this pack are intended and shows which bolts are contained in the pack.

| Description | Cat. No. | Application | Content |
|--------------------------|---------------|---|---------|
| Seat Bolts Black | SBB 02 | All Bonneville and T100 models with stock seats. | |
